

SIMPLIFY MED

Medical paperwork, made clear.

A plugin that turns clinical documents into a plain-language, fact-checked care plan.

Tejit Pabari

THE PROBLEM

Patients leave the visit unsure what just happened

57%

understood only part of their visit, or got too little information

51%

missed critical questions or were too overloaded to ask them

58%

had to contact the doctor again after the visit

“I kind of go dumb when they start talking.” — patient

 My research: 200 patient surveys · 50 patient interviews · 30 clinician interviews

USER RESEARCH · 200 SURVEYS · 50 INTERVIEWS · 30 CLINICIANS

Both sides of the visit named the same gaps

■ Patients (interviews) ■ Clinicians

Information overload

→ simplify

Unprepared for the visit

→ prep

Jargon and results

→ med-lit

Clinician: “A thousand pages, but only two usable ones.” · Bars: share of interviews raising each theme

THE SOLUTION · SIMPLIFY MED

Grounded by design: every sentence traces to the source

1 Split

Numbered source lines

2 Ground

Facts tied to a line

3 Simplify

Plan from facts only

4 Review

Fidelity and coverage

5 Correct

Bounded fixes only

6 Finalize

Numbers re-checked

Source-grounded

Every fact is quoted from an exact line. The writer never sees the raw note, only checked facts.

AHRQ plain language

299 AHRQ word swaps, 47 abbreviations spelled out, aiming for a 6th-grade reading level.

Checked by code

Scripts, not the AI, verify quotes, citations and every number. Full audit trail.

Same ER report, two results

Before · ChatGPT on the raw report

Long, dense, still full of jargon

What happened

You had been having a **left-sided headache for about 2–3 days**, starting around the upper neck/back of the head and spreading across your head. Then you developed **persistent tingling in the palm of your left hand**.

Urgent care also did an ECG that looked abnormal, so they sent you to the ER. You **did not have chest pain, shortness of breath, weakness, speech difficulty, or vision changes**.

Your neurological exam in the ER was essentially normal except that sensation felt different in your **left palm**.

What they were trying to rule out

Because headache plus one-sided tingling can sometimes indicate a neurological problem, the ER investigated for things such as **stroke, bleeding, blocked/narrowed blood vessels, aneurysm, or an artery dissection**.

They also reviewed the abnormal ECG to make sure it didn't look like a heart attack.

What the tests showed

Brain MRI: Normal. There was **no evidence of a stroke, mass, bleeding, swelling, or other significant brain abnormality**. There was only mild lining thickening in one sinus, which the radiologist did not consider acute sinus disease.

...and it keeps going

After · Simplify Med

Short, action-first, every line from the source

Your ER visit, simplified

You went to the ER because you had a **headache for several days, neck pain, tingling in your left hand, and an abnormal heart tracing at urgent care**.

What did they find?

The important tests were reassuring:

- **Brain MRI:** Normal. No stroke was seen.
- **CT/CT angiogram of your head and neck:** Normal. No blocked blood vessels, aneurysm, or artery tear was found.
- **Neurologic exam:** Normal except for slightly different sensation in your left palm.
- **Blood tests:** The ER doctor described them as unremarkable.
- **Heart tracing:** It showed a right bundle branch block and first-degree AV block, but the ER doctor did **not** think it showed a heart attack or other acute loss of blood flow to the heart.

The ER diagnosed you with:

- **Acute headache**
- **Tingling in your left arm/hand**

They did not find an emergency cause for your symptoms, and you were discharged in stable condition.

What should you do now?

Schedule a **primary-care appointment** to follow up on the headache, hand tingling, and abnormal heart tracing.

You were **not prescribed any new medicines**.

When should you go back to the ER?

Return to the ER if you develop any new or worsening symptoms.

WHAT'S NEXT

One plugin for the whole visit

BEFORE THE VISIT · NEXT

prep

Requirements, what to bring, and a prioritized question list, following the AHRQ toolkit

AFTER THE VISIT · LIVE

simplify

Clinical documents into a plain-language, source-checked care plan

FOR EACH PERSON · NEXT

med-lit

A research-backed personal health-literacy profile, so explanations fit the reader

Later, from the research: **care circle** for family and caregivers, raised in 76% of patient interviews.

INSTALL IN 3 STEPS

1. Clone the repo

```
git clone github.com/tejitpabari99/simplify-med-plugin
```

2. Build the plugin

```
python3 build.py
```

3. Import the ZIP from dist/ into OpenAI

Then ask: "Simplify this medical document into a plain-language care plan."
